Professional Summary

Backend Java Developer with hands-on experience in building scalable REST APIs using Java, Spring Boot, and Microservices architecture. Experienced in IoT-based backend systems, device onboarding workflows, authentication & authorization, and database-driven applications. Strong understanding of Agile development, backend system design, and production-ready backend services.

Technical Skills -----

Languages & Frameworks: Java 8+, Spring Boot, React.js, Spring Security, Spring Data JPA, Hibernate, Microservices

Core Concepts: OOPs, Collections Framework, Exception Handling, Multithreading, JVM Basics

Design: System Design (LLD), SOLID Principles, Design Patterns

Build & Deployment Tools: Maven, Gradle, CI/CD Pipelines, AWS EC2 (Basic Deployment)

Databases: MySQL, PostgreSQL

Project Management & Methodologies: Jira, Agile / Scrum

Version Control Systems: GitHub, GitLab

Operating Systems: Windows, Linux

Work Experience -----

Happiest Minds Technologies (Apr 2024 – Present)

Software Engineer

Project: EXP Global – IoT Device Onboarding Platform

Role: Backend Java Developer

- Designed and developed RESTful backend services using Java and Spring Boot for IoT device onboarding and account management workflows.
- Implemented CRUD operations and business logic for Account Server services using Spring Data JPA and relational databases.
- Worked on authentication and authorization mechanisms to secure APIs and protect device and account data.
- Contributed to a microservices-based backend architecture, focusing on service communication, scalability, and maintainability.
- Participated in low-level system design discussions and followed SOLID principles and clean code practices.
- Collaborated with cross-functional teams in an Agile environment, tracking tasks and progress using Jira.

Trainee Software Engineer

Project: MediXpress – In-house Medicine Delivery System

- Developed backend business logic using Java to assign delivery personnel to orders based on availability and order status.
- Implemented order-to-delivery mapping workflows to ensure accurate and timely order fulfillment.
- Worked with relational databases to design and manage tables for orders, deliveries, and assignments.
- Gained hands-on experience in backend system design, API workflows, and real-world application development.

Project -----

AI-Powered Email Reply Generator with Gmail Integration

Role: Java Full Stack Developer

- Designed and developed a full-stack AI-powered email reply generation system using React and Spring Boot.
- Integrated Google Gemini API with a Spring Boot microservice to generate contextual email responses based on user-selected tone.
- Implemented dynamic tone handling (Professional, Casual, Friendly) with structured request-response processing via REST APIs.
- Built and exposed secure RESTful endpoints for AI prompt handling and response generation.
- Developed a Chrome Extension integrated into Gmail's compose UI to enable real-time AI-based reply generation within the browser.
- Ensured modular backend architecture and clean service-layer separation following SOLID principles.
- Demonstrated practical implementation of generative AI integration within a modern full-stack architecture.

Education -----

Master of Computer Applications (MCA)

Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar
2021 – 2023

Achievements & Certification -----

- **Chairman's Team Award** – Appreciation for leadership and technical coordination.
- Certification: **Java Full Stack Development** (Java, Spring Boot, React.js)
